DETAILED ACTION

Specification

1. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 112

- The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 3. Claims 5-15 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 5-7 and 13 each recite the limitations "said first coefficient," said second coefficient," and "said third coefficient" in lines 1-2 of claims 5-8 and lines 1-3 in claim 13, and claim 8 recites "said first coefficient" and "said second coefficient" in line 1 of that claim. There is insufficient antecedent basis for these limitations in the claims.

While claim 4 recites first, second and third coefficients, it should be noted that claims 5-8 and 13 depend from claim 2, which does not recite first, second and third coefficients.

Allowable Subject Matter

4. Claims 1-4 and 16-23 are allowed.

Application/Control Number: 10/082,284 Page 3

Art Unit: 2625

5. Claims 5-15 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

- 6. The following is a statement of reasons for the indication of allowable subject matter: No prior art has been found to disclose or suggest modifying a cell dimension of an obtained periodic screen in response to a screen angle of the screen, thereby calculating an optimal sample dimension suitable for descreening a halftone image, as recited in base claims 1, 16 and 18; or a print drive comprising a preproofer for determining an optimal sample dimension for at least one of raster data sets created for each color separation associated with a halftone image, and for descreening, rescaling, resizing and combining said at least one of said raster data sets using said optimal sample dimension to create a proofer raster data set, said proofer raster data set including the descreened, rescaled, resized and combined at least one of said raster data sets, as recited in base claim 23.
- 7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
- U.S. Patent 4,907,096 (Stansfield et al.) discloses a method for descreening, including a step of generating signals representing single values for respective blocks of high-resolution pixels from binary data in the blocks.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thomas D. Lee whose telephone number is (571) 272-

7436. The examiner can normally be reached on Monday-Friday, 7:30-5:00, alternate Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David K. Moore can be reached on (571) 272-7437. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
